

TELEMATICS & SENSORIC SOLUTIONS

The Packages

GATX

GATX Rail Europe

BASIC

We provide data with basic telematics platform access alongside real-time wagon position updates every hour. You can access the wagon position and accumulated mileage for the current year. As GATX Rail Europe customer, you are automatically issued basic access via company logins.

ADVANCED

We provide telematics data via the standardized interface ITSS 1.2 directly to your ERP system or telematics platform of choice. Included in the advanced package are wagon position updates every 30 minutes. The advanced telematics package also provides current telematics device status updates, mileage reporting, geofencing, and alerts. Historical wagon position data is available for up to six months. To ensure the seamless integration and functioning of devices, our IT helpdesk is available to you.

PREMIUM

In addition to all advanced services listed above, our pro package also includes standard sensor data and shock detection. Optionally we can add customized sensor solutions where needed. Historical wagon and sensor data is available for up to 12 months. Again, we provide telematics data via standardized interface to your ERP system or telematics platform of choice.

CUSTOMIZED

Our customized option goes beyond telematics and sensors and can be flexibly compiled according to your data needs. Together, we develop dedicated interfaces to your ERP system so you can use data to digitalize and optimize your transport management and supply chain, including contract and invoice data transfers, revision calls, reminders, revision status and upcoming revision dates, as well as damage notifications and repair details.
